

**Senate GOP Farm Bill
Agricultural Act of 2026 (Farm Bill 2.0)**

Only some of the highly destructive GOP Farm Bill provisions that will:

- Permanently exempt dozens of hazardous pesticides from human health and environmental safety reviews
- Exempt genetically engineered plants from safety review.
- Gut the *Endangered Species Act*.
- Delay the review of hundreds of pesticides for harms to human health, endangered wildlife, and endocrine disruption until 2031.
- Weaken and delay efforts to protect children, farm workers, and public health from dangerous pesticides.
- Codify continued reliance on petrochemical fertilizers through the promotion of chemical-intensive "precision agriculture."
- Dramatically cut the Supplemental Nutrition Assistance Program (SNAP) program in one year.
- Weaken the rigor of the organic enforcement system, which establishes consumer trust in the organic label.

Provisions needed:

- Eliminate draconian cuts to the Supplemental Nutrition Assistance Program (SNAP) program in one year.
- Reverse the U.S. Supreme Court decision in *Monsanto v. Durnell*, which ruled that pesticide warning labels are not required on potential adverse effects, like cancer, from product use.
- Support for transition to organic agriculture.
